# Idea / Prototype

- While these days faculty have more work than just take care of students and it is difficult for both teachers and related staffs to monitor the them. Whereas the storing and retrieving an information is a difficult task, it requires much amount of unnecessary worker to do the task.
- The college management system will manage all the work in any college or institute in particular order so that the time requirement and complexity of the system will be reduced, at first it will focus on student related information
- While the main objective of this project is to computerize the paperwork in the system and automate the work. The computerization is done so that the storage of all the details regarding students and teachers will be stored in the system which makes system centralized and the chance of duplication of any data is minimized
